"If the Race Were Today" — Medal Projection

Men & Women · Generated July 02, 2026

How to read this: We reconstruct the Olympic field from current World Rankings under the real quota (60 athletes, max 3 per country, a 3rd only if inside the top 30), removing retired athletes. Each athlete's finish is projected by our race model, anchored by athlete strength (Elo) and world ranking, then simulated thousands of times to estimate the probability of winning a medal (top 3).

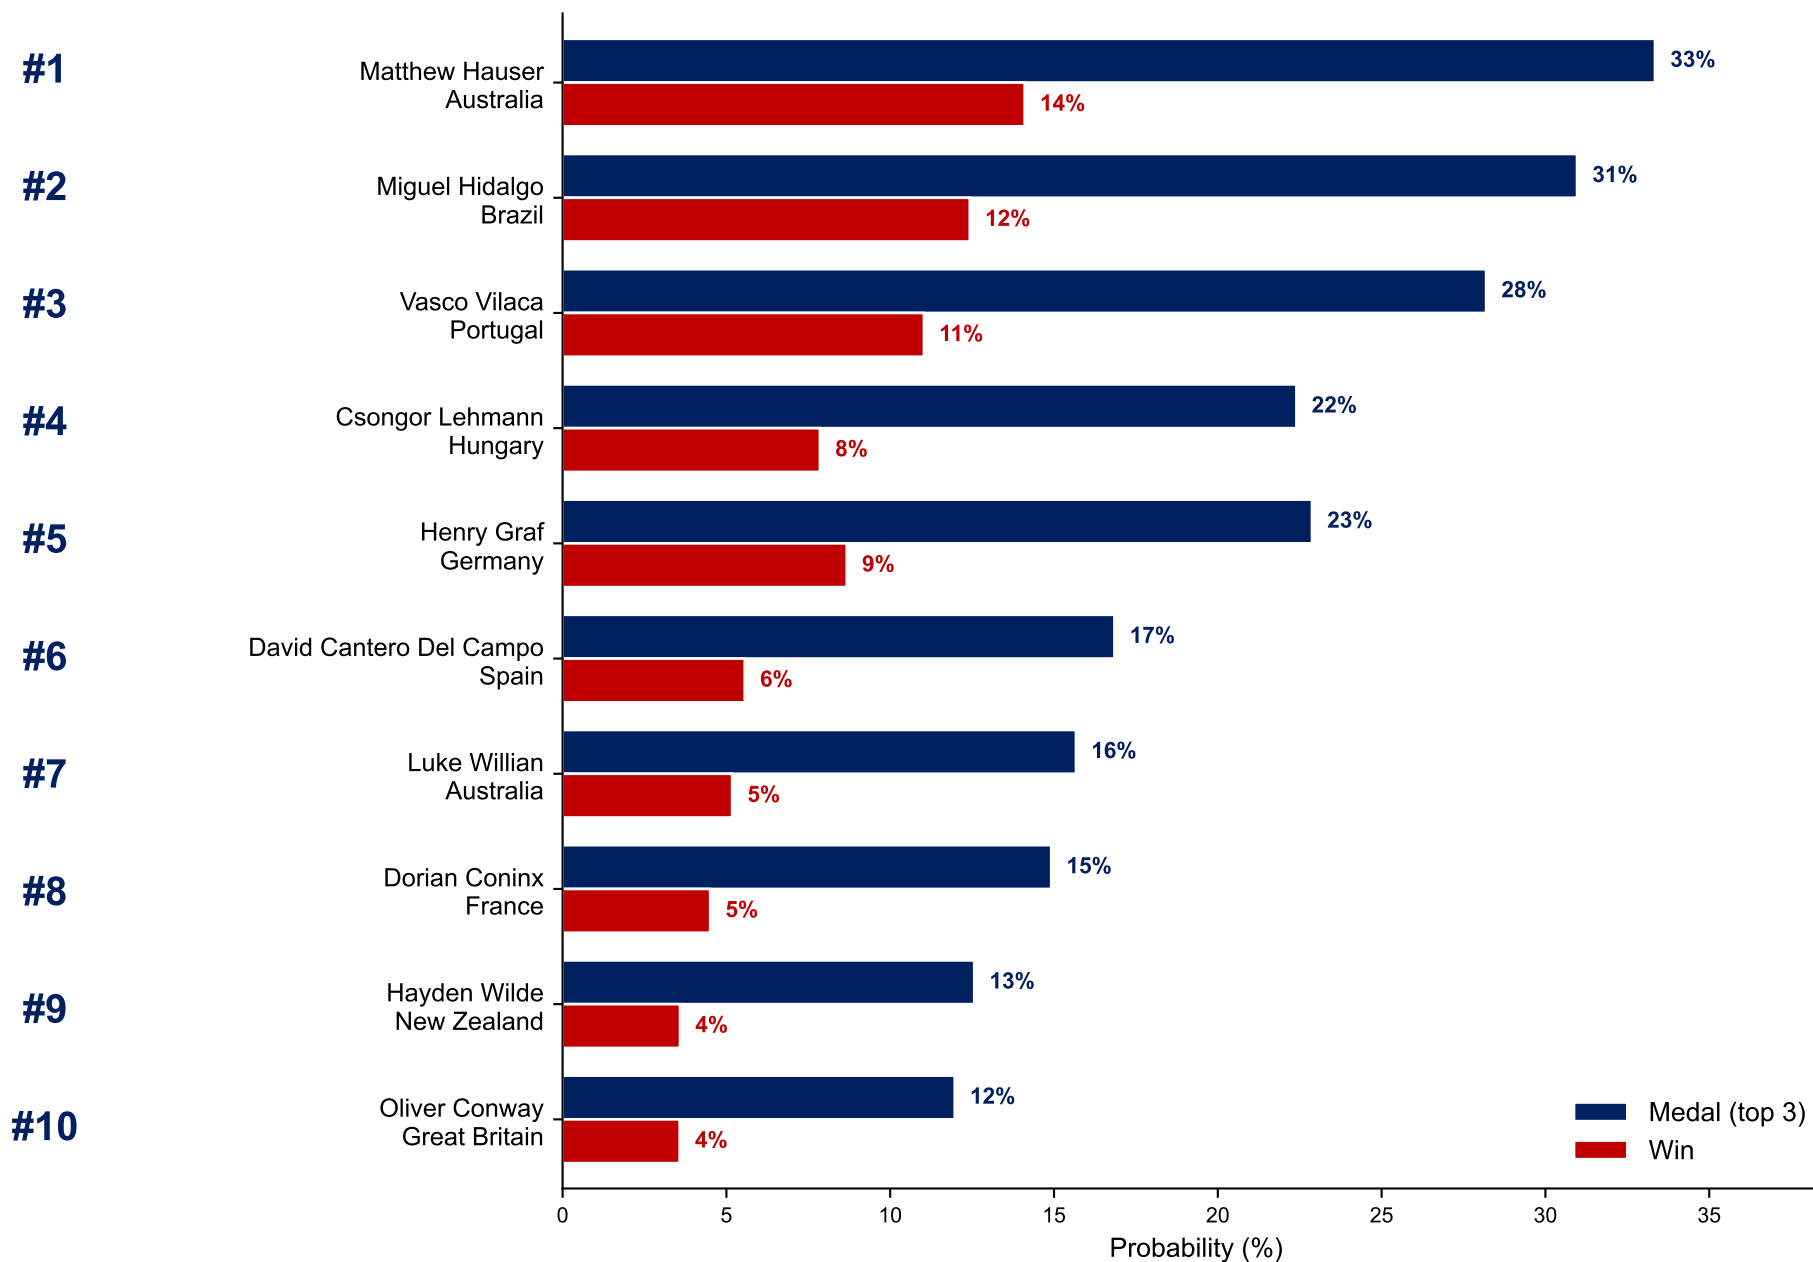

$P(\text{medal})$ = share of simulations in which the athlete finishes on the podium. These reflect current form: athletes returning from a lighter season rank lower than their reputation.

Men — Top 10 Medal Contenders

Chance of a medal (top 3) and a win, "if the race were today"

Projected favorite: Matthew Hauser (Australia) — 33% medal, 14% win. USA names in red.

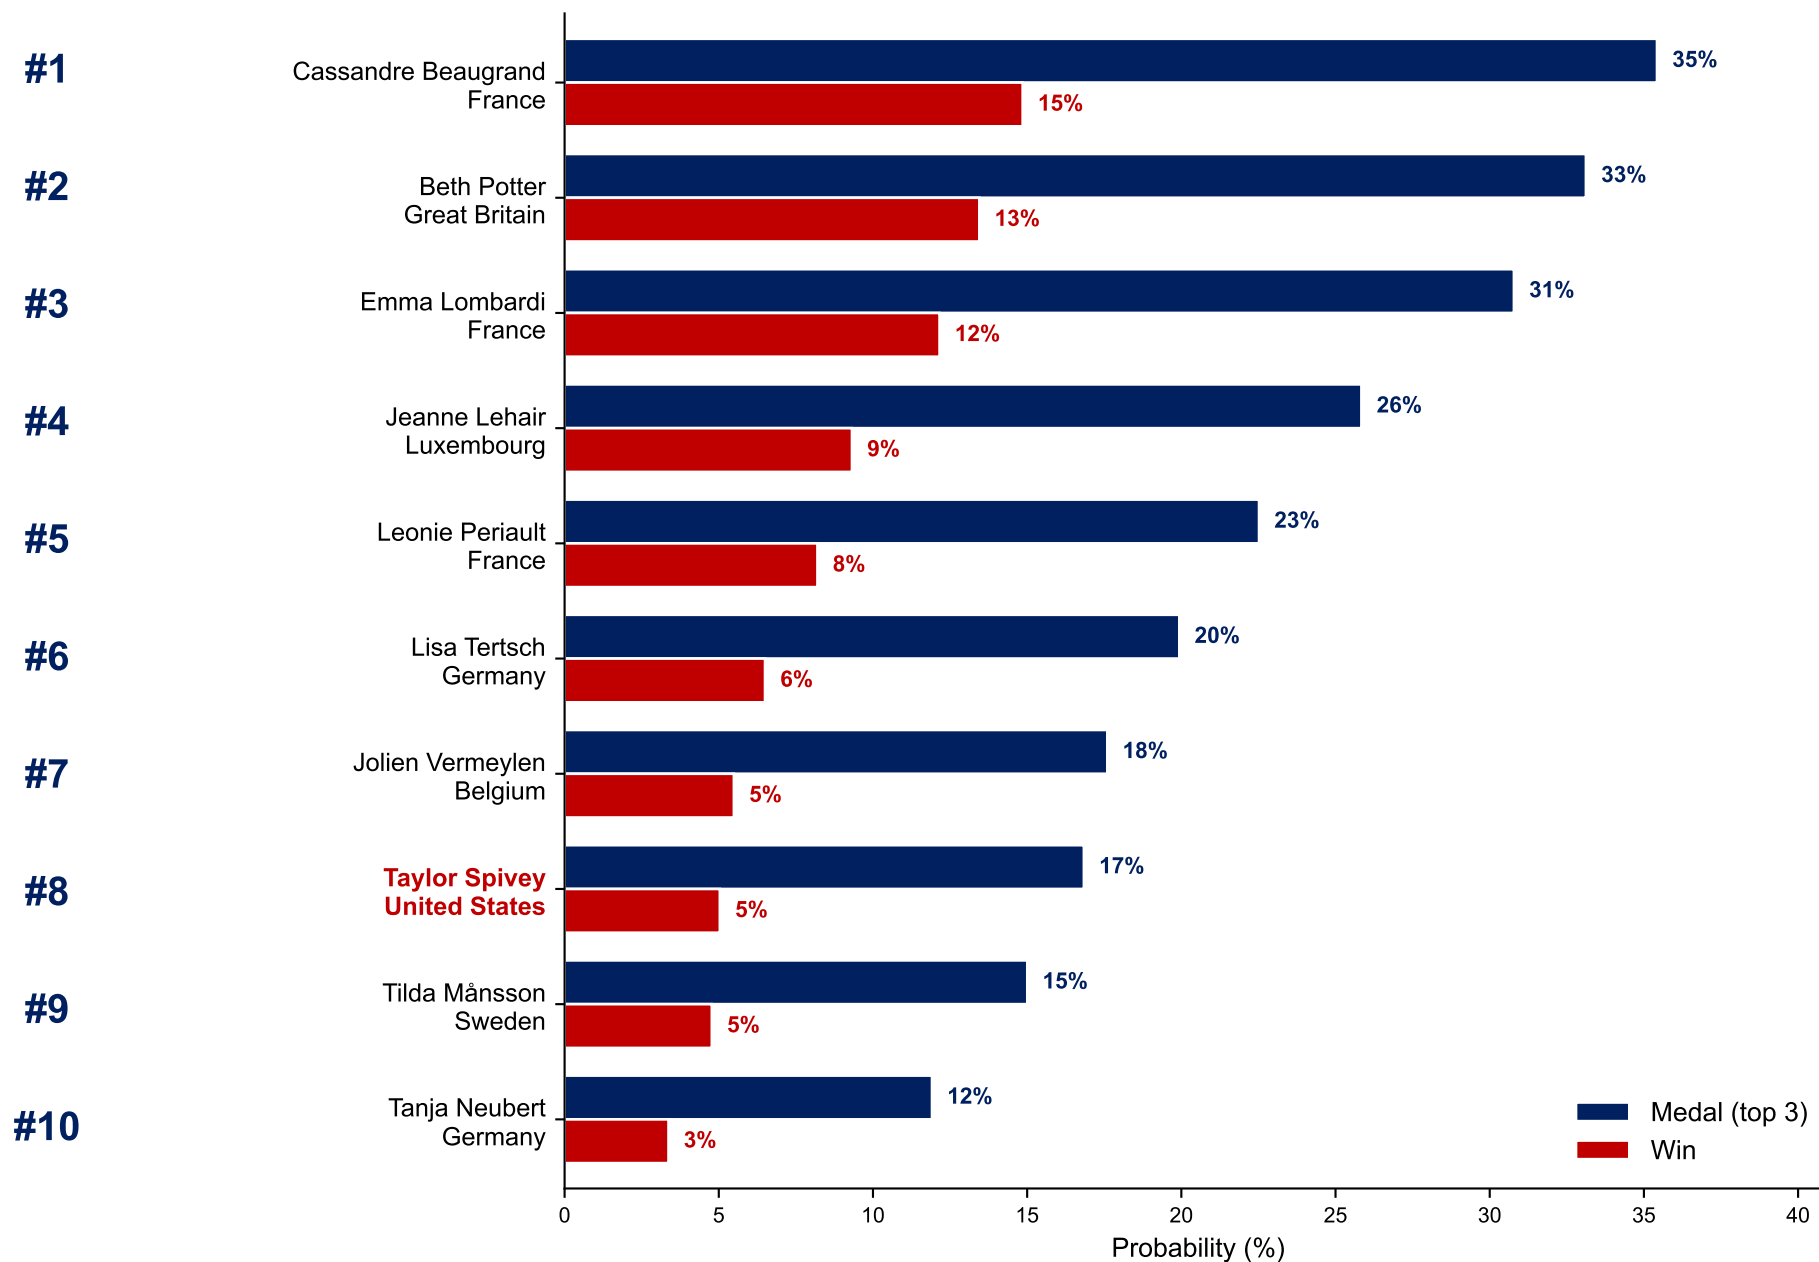

Women — Top 10 Medal Contenders

Chance of a medal (top 3) and a win, "if the race were today"

Projected favorite: **Cassandre Beaugrand (France)** — 35% medal, 15% win. USA names in red.

Appendix — Men: Full Field

All qualified athletes, projected finish order
